

Catherine Nguyen

Catherine.Nguyen@ttu.edu

Primary Track

- Major: IT Data Analytics/Security
- Minors: CS, Math, Engineering

Core Competencies

I have professional experience working with the following:

- Proficiency in Python programming + automation.
- Proficiency in SQL manipulation + automation.
- Foundational knowledge of application structure and development.
- Software testing and validation.
- Database design, auditing, automation, and integrity.

Self-Taught & Domain Expertise

I have worked on various security-related projects professionally, so I can provide my team with ideas for secure business needs/metrics.

If needed, I can provide basic experience with web development, embedded systems, or other app/system development languages (JavaScript, MASM32, PowerShell, C...)

Team Role Archetype

I identify with 3 styles: As an Organizer, I value the look of well-documented code, UI, and overall project documentation. As a Debugger, I frequently check programs for errors or better ways to write code/functions. As a Researcher, I will browse the Internet for open-source projects that may relate to what we are working on. There is an abundance of information to learn from, so I definitely would want to see what already exists out there.

Knowledge Gaps

I am not too proficient in any cloud software/frameworks currently.

Availability

To give a general number, I can commit ~20 hours a week to my team. My semester workload is 6 classes; however, the workload will not be any issue to my commitment to my team. I can adjust to our project needing more time if needed.

Why Pick Me?

My value to a team is that I am a dependable and proactive teammate, with quick response time. My experience and hobbies have taught me to be able to quickly pick up new frameworks and skills that I may not have just yet.
